

A DISPOSABLE ARTICLE WITH ENHANCED TEXTURE

ABSTRACT OF THE DISCLOSURE

A single- or multi-ply disposable article comprises at least one foreshortened, wet-extensible ply that has a surface topography exhibiting regions of minimum and maximum calipers comprising creping ridges, wherein the creping ridges are oriented in a first direction; and a coating bonded to the at least one foreshortened ply, the coating defining bonded regions and a plurality of unbonded regions in the ply. The minimum caliper is coincident the bonded regions, and the coating comprises a plurality of mutually parallel lines of adhesive extending in a second direction substantially perpendicular to the first direction.
